PROFESSIONAL SUMMARY

Multidisciplinary technologist combining GIS/remote sensing, UAV mapping, AI automation, and Web3 development into end-to-end solutions. Final-year Geology student, with a track record of shipping production-grade systems from geospatial analysis pipelines and drone data workflows to AI-powered automation tools and blockchain infrastructure. Available for freelance and contract engagements across spatial tech, AI systems, and decentralized platforms.

EXPERIENCE

Founder & Lead Developer — Arc Pay (arcpay.com) | 2026 – Present

- Architected a USDC stablecoin payment infrastructure platform on Arc Network, serving as invoice and receipt generation layer for the Arc ecosystem
- Shipped a 13+ page Next.js 15 TypeScript frontend covering dashboard, invoices, API keys, webhooks, and public checkout
- Built the `@arcpay/sdk` TypeScript package including a viem-based USDC Transfer event watcher, Clerk auth integration, Svix webhooks, and a 9-point on-chain payment verification flow

Freelance Automation Engineer & AI Systems Builder | 2026 – Present

- Designed and deployed a production Instagram automation service using a Telegram bot, Cloudinary media pipeline, and the Instagram Graph API hosted on a VPS, supporting multi-account scheduled publishing
- Built GISS, a Windows-first offline GIS desktop application using PySide6, ONNX/PyTorch, and local CUDA inference for automated feature digitization from GeoTIFF satellite imagery

Geospatial Analyst Intern — EIB Stractoc Limited, Abuja | 2025 – 2026

- Delivered GIS and remote sensing analysis using ArcGIS Pro, ArcMap, QGIS, and ENVI across spatial intelligence and infrastructure projects
- Processed drone-acquired orthomosaics (DEM/DTM, NDVI, point clouds) for environmental and infrastructure survey deliverables.
- Prepared satellite imagery and GeoJSON datasets for Abuja target sites.

EDUCATION

B.Sc. (Hons) Geology — Federal University Lokoja

November 2021 – October 2026 (Expected)

PROJECTS

GISS — Geospatial Intelligence Support System

Windows Desktop App · PySide6, Python, ONNX/PyTorch, GeoJSON, CUDA

- Built an offline-capable GIS desktop application that auto-digitizes geospatial features (buildings, roads, vegetation) from GeoTIFF orthomosaics using local NVIDIA GPU inference — no cloud dependency
- Integrated SAM 2, GroundingDINO, and YOLOv8-seg inference models into a PySide6 GUI with a full feature editing suite: Geometry Type Controller, Feature Properties Editor, GeoJSON Preview, Topology/Snapping panel, and Training Coverage tab
- Compiled a seven-file structured markdown knowledge base derived from the *GeoAI with Python* book to power AI-assisted development and agent handoff workflows

Arc Pay — Stablecoin Payment Infrastructure

arcpay.com · Next.js 15, TypeScript, viem, Clerk, Svix, Arc Network

- Designed and shipped an end-to-end USDC payment platform on Arc Network featuring public checkout, invoice/receipt generation, and a published developer SDK (`@arcpay/sdk`)
- Engineered a 9-point on-chain payment verification system with a viem-based USDC Transfer event watcher, Clerk authentication, and Svix webhook delivery — across a 13+ page production frontend

NYC Spatial Analytics & 3D Terrain Dashboard

Gis-preview · *QGIS, LiDAR DEM, Leaflet, Python (GeoPandas), EPSG:2263*

- Processed a 3.4GB LiDAR DEM tile of New York City in QGIS to generate high-resolution terrain indicators, analyzing ruggedness and elevation intelligence in relation to public park and green infrastructure.
- Reprojected all geospatial vectors from EPSG:4326 to EPSG:2263 (NAD83 / New York Long Island) using GeoPandas and QGIS to perform accurate distance-based buffer analyses (150ft zones), zonal counts, and point pattern clustering on over 680k+ street trees and 3,000+ wildlife records.
- Developed an interactive Next.js dashboard embedding a Leaflet-based vector web map with client-side layer controls, real-time geoprocessing overlays, and dynamic stats cards detailing NYC bike networks and canopy density.

TECHNICAL & PROFESSIONAL SKILLS

GIS & Remote Sensing : ArcGIS Pro, ArcMap, QGIS, ENVI, Ortho mosaics, DEM/DTM, NDVI, Leaflet

Geospatial AI & ML : SAM 2, Grounding DINO, YOLOv8-seg, ONNX, PyTorch, OpenCV, CUDA Inference, GeoAI Pipelines

Languages :TypeScript, JavaScript (ES6+), Python, Node.js, SQL

Frontend : React, Next.js 15, Tailwind CSS, Framer Motion

Backend & APIs : Node.js, Express.js, FastAPI, REST APIs, Telegram Bot API, Instagram Graph API, Cloudinary,

Databases: PostgreSQL, MongoDB, SQLite,NeonDb

DevOps & Infrastructure : Git/GitHub, Docker, VPS Deployment, Vercel

Web3 & Blockchain : Solana, Arc Network, USDC/Stablecoin Infrastructure, Smart Contract Integration

Creative & AI Tools : DaVinci Resolve, Prompt Engineering, AI Workflow Design, AI-Assisted Development

LANGUAGES

English — Fluent
